

EDUCATION

GOVIND BALLABH PANT INSTITUTE OF ENGINEERING AND TECHNOLOGY, PAURI GARHWAL
B.Tech Computer Science (AI&ML)

Aug 2020-July 2024 - 70%

SKILLS SUMMARY

- **Programming Languages:** C/C++, JavaScript, Python, SQL
- **Core CS Fundamentals:** Data Structure & algorithms , Object-Oriented Programming Structure
- **Frontend Development:** HTML5, CSS3, Tailwind CSS,React .js, Responsive Design
- **Backend Development:** Node.js, Express.js,Flask,Django, RESTful APIs, WebSocket
- **Databases:** MongoDB, Supabase
- **Python- Libraries:** Pandas, Numpy, Scipy, Matplotlib, Scikit-Learn, Seaborn, StatsModels, SQLAlchemy
- **Operating Systems:** Windows , Red Hat Enterprise Linux (Fedora)
- **Developer Tools:** Visual Studio Code, PyCharm, GitHub, Tableau, PowerBI
- **Soft Skills:** Technical Communication, Team Collaboration, Problem Solving, Leadership, Continuous Learning

WORK EXPERIENCE

Data Analyst | Research & Digital Systems –CSIR-CBRI(Central Building Research Institute) (Dec.2025 - currently working)

- **Designed and implemented end-to-end data analysis workflows** for high-volume experimental datasets, including data preprocessing, statistical modeling, time-series transformation, and visualization using Python (NumPy, Pandas, Matplotlib), enabling structured insight generation and performance evaluation.
- **Analyzed complex measurement datasets** to identify trends, extract quantitative metrics, and support technical research objectives through data-driven modeling and validation techniques.
- **Supported digital platform enhancement initiatives** by contributing to the development and content structuring of an institutional web platform using the MERN stack, improving data accessibility, usability, and information management.

Intern(Frontend Developer), Mapsily (April.2025 - Nov.2025)

- Architected a responsive React.js dashboard that visualized real-time data, slashing data retrieval time by 30% and elevating overall user experience
- Crafted reusable React components for dynamic form inputs, accelerating new feature development by 25% and incorporating ARIA standards for WCAG compliance.

Intern, BEL (Bharat Electronics). Kotdwar, Uttarakhand (June.2023 - July.2023)

- Gained extensive hands-on experience with emerging technologies at BEL-Kotdwar while developing deep practical insights into advanced security systems architecture, implementation, and industry best practices.
- Participated in complete project lifecycle management from conceptualization to deployment, ensuring alignment with organizational security requirements and staying at the forefront of industry innovations in defense technology.

PROJECTS

CSIR-CBRI PROJECTS: (Currently Working)

1) Data Analysis & Signal Processing:

- **Data Analysis & Statistical Modeling:** Analyzed large-scale experimental datasets using Python (Pandas, NumPy, SciPy) to identify performance trends, detect anomalies, and generate actionable insights aligned with business and research objectives.
- **Automation & Reporting Frameworks:** Built automated data pipelines and dynamic visualization dashboards to standardize reporting, reduce manual analysis time, and improve decision-making efficiency across cross-functional teams.

2) Web Development (MERN):

- CSIR-CBRI Official Website Development (MERN Stack): Worked on frontend and backend modules using MongoDB, Express.js, React.js, and Node.js to manage institutional content and present research outputs in a structured digital format.

CodeSync Meet(Remote Interview Platform)

- **Engineered a full-stack interview platform** integrating a VSCode-powered code editor, real-time video conferencing, secure code execution, live chat, synchronized mic/camera controls, screen sharing, recording, and confetti-triggered feedback notifications to deliver an interactive and analytics-driven virtual assessment experience.
- **Built scalable backend and collaboration workflows** using Node.js & Express REST APIs, Clerk authentication, background asynchronous jobs, TanStack Query for high-speed data fetching, live dashboard analytics, GitHub workflow automation, and advanced PR analysis (CodeRabbit) to optimize secure and efficient coding interview management.

Medicose-Plus-Disease Prediction Platform

- Built and integrated a full-stack Disease Prediction Platform (Medicose Plus) using React (Vite), Node.js, Express, MongoDB, and Flask, implementing JWT authentication, protected routes, and RESTful APIs for prediction, symptom metadata, doctor discovery, consultation booking, and health-metric tracking (BMI/Glucose) with dashboard-based data visualization (GlucoChart).
- Designed and productionized an ML classification pipeline with scikit-learn on Dataset, including preprocessing, label encoding, Stratified 5-Fold Cross-Validation, model selection (RandomForest vs ExtraTrees), artifact persistence via joblib, and inference APIs returning disease prediction, confidence score, and top alternatives.

TicketPortal(BookMyShow-Clone using MERN)

- using MERN stack (MongoDB, [Express.js](#) , [React.js](#), [Node.js](#)) with responsive design, secure authentication, movie browsing, seat selection, and integrated payment processing through RESTful API architecture.
- Optimized scalable MongoDB database structure for efficient storage and retrieval of movie data, user profiles, and booking history while implementing a comprehensive booking management system with enhanced query performance.

PROFESSIONAL SUMMARY

Strong expertise in data analysis, visualization, and experimental data interpretation, with hands-on MERN stack development. Proficient in transforming complex datasets into actionable insights, building data-driven applications, and collaborating across technical teams. Experienced with real-world institutional data, AI/ML exposure, and delivering scalable, insight-focused solutions.
